KIDS
FILTRAL
FASHION EYEWEAR

Since 2022 we are offering sunglasses made of recycled plastic – our step towards more sustainability.

The basis of our new sunglasses is so-called “post-consumer material”.

Here, after the end of their use purpose, plastics are not disposed of as residual waste, but are treated and reused.

The quality of the new sunglasses made of recycled material remains at an unchanged, high level; however, the manufacture protects valuable resources.

The granulate is certified by the Global Recycled Standard (GRS).

This standard records the proportion of recycled material in the product and also includes requirements on additional substances used as well as guidelines on environmental management and social responsibility in the manufacturing company.

FRAMES

(and LENSES of certain models)

UV- PROTECTION OF SUNGLASSES

All Filtral sunglasses provide 100% protection against dangerous UVA, UVB and UVC rays. In addition, the harmful short-wave blue components of visible light are partly filtered out – without the colour reproduction being distorted.

UVC rays (up to 280nm)

Extremely short wavelengths which do not penetrate the earth's atmosphere.

UVB rays (280nm - 315nm)

Rays with this wavelength cause sunburn and damage the eye tissue.

UVA rays (315nm - 380nm)

Rays with this wavelength tan the skin but also lead to premature skin aging and can damage eyesight.

Violet/Blue light (380nm - 500nm)

Rays of this wavelength act like UVA rays, but reach the visible light spectrum. Therefore, Filtral sunglasses filter out part of the harmful short-wave blue components but maintain the necessary spectrum range to ensure correct colour reproduction.

Green and red light (500nm - 780nm)

Rays in the green and red spectrums are not dangerous to people's health.

100% UV protection

FILTRAL
FASHION EYEWEAR

FILTER CATEGORIES OF SUNGLASSES

All Filtral sunglasses come with 100% UV protection to protect the eyes from harmful UV rays.

However, the degree of tinting is also crucial when it comes to choosing the right sunglasses, as this reduces light transmission to the eyes and makes it easier to see well. Just as there are different lighting conditions – there are also different degrees of lens tint. Nevertheless, no matter how strong or dark the tint is, all Filtral sunglasses guarantee 100% protection against UV rays.

With sunglasses, there is a distinction made between five different filter categories regarding the tinting and light transmission.

The most commonly bought sunglasses are those with lenses with a filter category of between 1 and 3.

Glasses with a category 4 tint require special side guards and are not sold as part of the Filtral range.

colourless/ light tint

Transmittance:
> 80 %

- Polarisation filters reduce disruptive glare, e.g. from wet or shimmering roads, in snow, from light sand or from water surfaces
- Ensure glare-free and high-contrast vision
- Improve spatial perception
- Reduce eye strain

Comparison: With polarisation filter vs. without polarisation filter

NORMS & STANDARDS FOR SUNGLASSES

Alongside an attractive design, the highest levels of quality and safety are also our top priorities – these are the basis for each and every one of our products.

All Filtral sunglasses comply with the international standard ISO 12312.

All Filtral glasses bear the CE mark and thus document their compliance with the EU regulations.

The quality of the products is also regularly checked by recognised testing institutes.

Quality management

Filtral works with a quality management system which is certified according to the international standards ISO 9001 and ISO 13485. All products are therefore subject to strict controls – this guarantees the highest quality and safety.

Filtral's sunglasses are tested well beyond the requirements of the international standards in the company's own testing facility (certified in accordance with ISO 9001).

In addition, the products and materials are tested by the TÜV Rheinland group and other accredited testing institutes.

Energy and environmental management

Filtral has an energy management system which is certified according to ISO 50001 and an environmental management system which is certified according to ISO 14001.

Both are developed further on a consistent basis as part of the sustainability strategy of the uvex group.
