THE HIGHLIGHTS OF THE SPRING/SUMMER 2024 COLLECTION

This season, the focus is on improving our most popular classics, on a clearer structure for jerseys and on applying our cycling legwear expertise to new products.

Our SITIVO legwear concept remains available in different versions and with three padding variants. The line is, however, receiving a visual update. The new, modern look is enhanced with black reflective elements in full-surface logos and in the leg grippers. On top of that, the SITIVO cycling legwear is now also available in a stylish grey colour.

To put the finishing touch on the SITIVO product range, a SITIVO jersey has been added to match the cycling legwear. The new jersey stands out for its high-quality materials as well as its technical and simple look, and makes for a perfect kit thanks to the incorporation of the legwear colours. The athletic fit matches the updated SITIVO cycling legwear perfectly.

As cycling legwear experts, our priority is to optimise our selection of cycling legwear products, so this part of our new collection in particular serves up a number of highlights:

Our popular SQlab GO legwear is now also available in the colour 'fossil'. The modern dark brown shade can be combined in a variety of ways, which is why it is also used in the newly developed Gravelito (M) and Gravelita (W) cargo shorts. The ANATOMIC REC M/W pad used in them was already impressive in our CANEZZA BIB M and fits the body optimally thanks to its ergonomic shape.

Following an intensive development process, the recycled CANEZZA BIB W endurance bib tights are now also available in a women's version. These high-performance bib tights impress not only with their exceptionally sophisticated and specific cut, but also with the ANATOMIC REC W padding, which was developed especially for women and is also made from recycled components.

Together with new cycling legwear developed from scratch, revised cycling shirts and blouses and a number of athletic products for the wind with a new, modern look, there is no shortage of highlights in the GONSO spring/summer 2024 collection.

Your GONSO team

GONSO.

BECAUSE THERE'S A STORY BEHIND EVERY SUCCESS.

In 1926, Johannes Gonser started a sewing workshop in Onstmettingen, a neighbourhood in Germany's mountainous Swabian Jura region, and gradually expanded it into a textile factory over time. When his eager grandson, Hans Gonser, took over the business, the latter came up with a new name for the company straight away: GONSO, a portmanteau of their surname and the company's location at the time.

In the 1960s, Hans Gonser dared to explore new fields of business and experimented with sports textiles.

Starting in the early 1980s, Hans Gonser came to focus on cycling textiles and revolutionised this market. He was a pioneer in working with the new, innovative 'Dunova' yarn material developed by Bayer. The use of this ultra-functional yarn was considered groundbreaking for the jersey and cycling legwear sector, as these products were usually made of wool and cotton in those days. Experimenting with advanced functional fibres gave the brand a major boost in its innovation and a knowledge advantage over its competitors. The innovative materials impressed consumers with their functionality and demand rose. GONSO expanded its cycling range determinedly and steadily enriched the market with further developments.

It set another groundbreaking milestone with the first cycling legwear to include built-in padding. This feature arose from the dissatisfaction experienced by the company's ingenious owner. Hans Gonser was a passionate cyclist, you see, and needed to complete training sessions on an exercise bike because of his severe osteoarthritis – which quickly became very painful. After just a short period of time, he was struggling with the same wounds that professional cyclists had to cope with back then.

Without hesitating, he put out a call within his company and gave his employees the challenging task of developing cycling legwear with built-in padding. The first sample of padded legwear was created a short while later and solved the problem.

Not long after that, the padding also came to be made from synthetic materials, which put the finishing touch on the functionality. With this development, Hans Gonser left an influence on the entire cycling legwear market that still remains today. He is considered the inventor of cycling legwear with synthetic padding.

GONSO.

BECAUSE EVERYONE IS DIFFERENT.

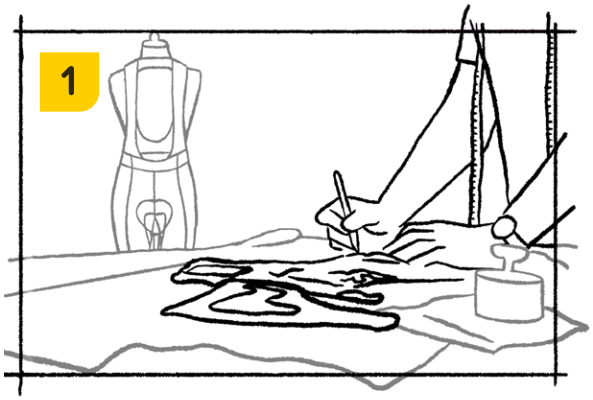
No body is like the other. We develop an individual cut for every size. Thanks to these gradations, you can choose the perfect legwear for you from over 50 different sizes.

GONSO.

BECAUSE WE KEEP TINKERING UNTIL EVERYTHING FITS PERFECTLY.

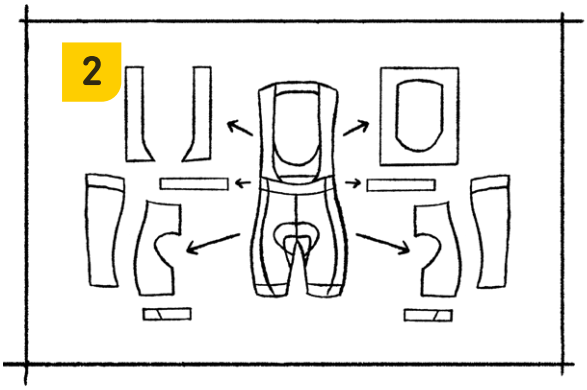
We at GONSO believe that a cycling legwear product is only finished when all sizes fit perfectly – even if the journey there is longer and harder. We see every piece of feedback as inspiration.

We test, revise and redevelop. Every idea inspires us to become even better so that every GONSO legwear product you buy is the best.



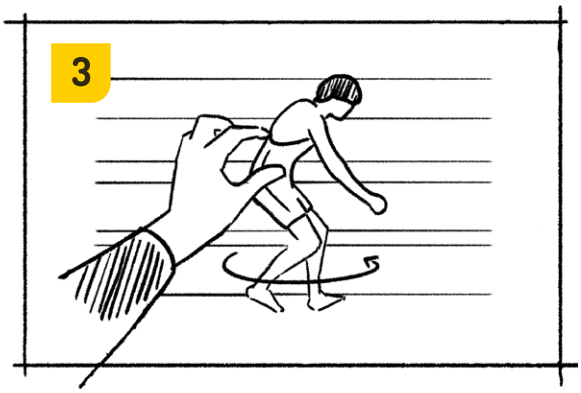
DESIGN

It all begins with the product idea. The materials and components are chosen and an initial sketch is drawn up.



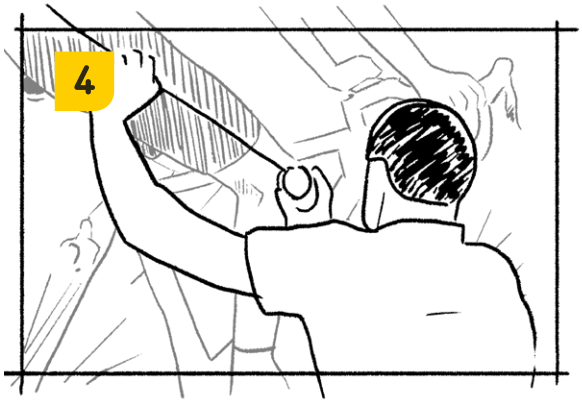
CUT

To achieve the optimal fit, each legwear model is first broken down into complementary, individual parts.



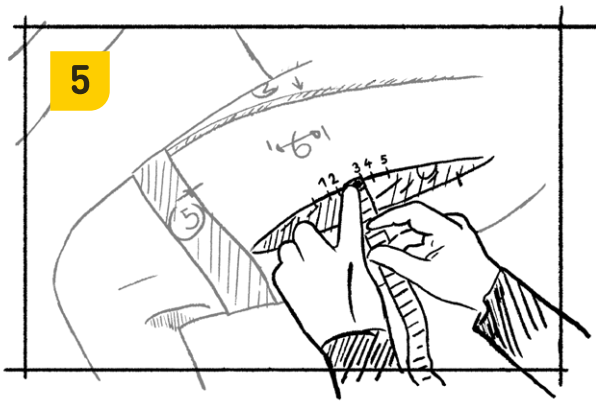
PROTOTYPING

The individual elements are used to create an initial prototype. The cut and fit are optimised based on this prototype.



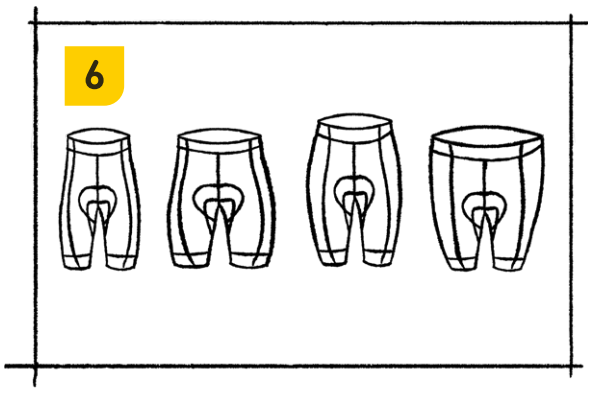
FITTING

We adapt the prototype to real people instead of tailor's dummies, so we can be more specific in considering body shapes and the way they change when moving.



ADJUSTMENTS

Corrections on a millimetre scale provide us with exact values that we can transfer to the final cut of this legwear model. This process is often repeated multiple times until the prototype fits perfectly.



SIZE GRADATIONS

The base size is scaled up and down to create different sizes in line with the product and body area. The non-linear scaling of the size increments creates products that fit in every size. After this, the production process begins.

MEN'S CYCLING LEGWEAR

GONSO has analysed the everyday problems of cycling in detail and, as an answer, developed the SITIVO cycling legwear.

Cycling legwear that caters to the individual requirements and pressure points of each cyclist thanks to three different pads, all with an aim of making cycling a pleasure.

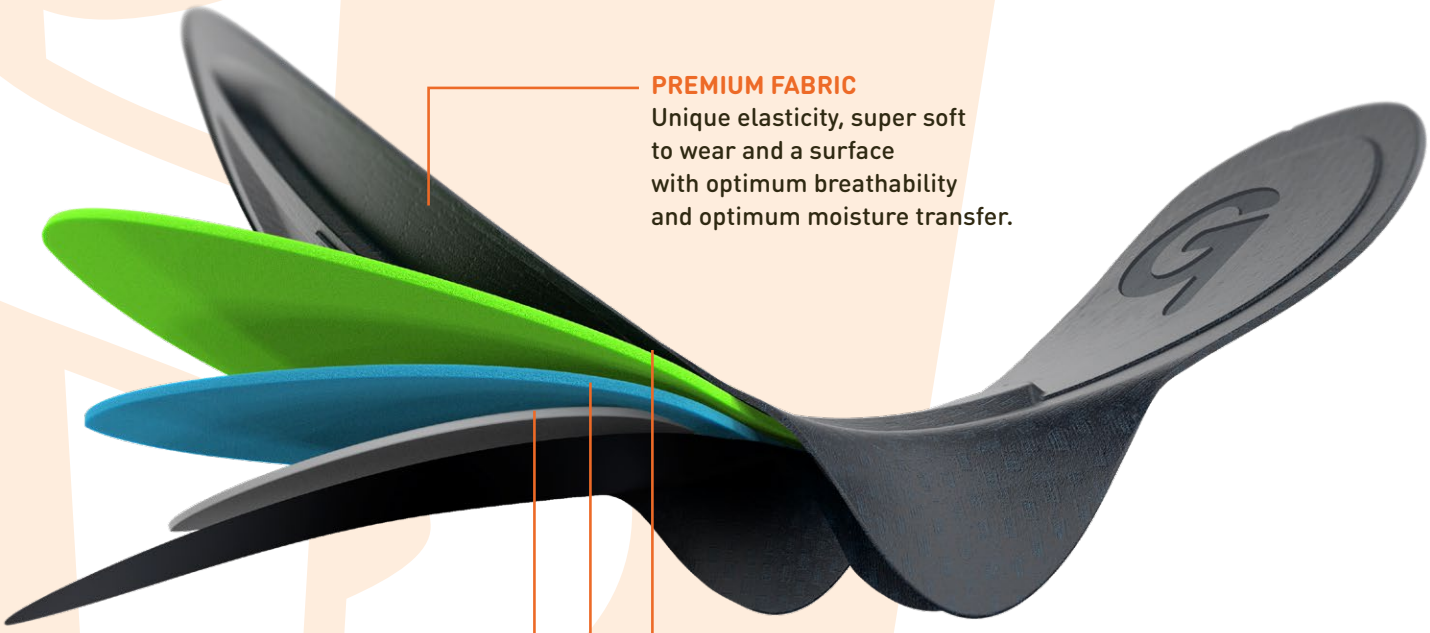
GONSO MEETS SQlab

Expertise in cycling legwear meets ergonomics experts



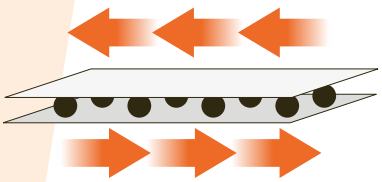
PREMIUM FABRIC
Unique elasticity, super soft to wear and a surface with optimum breathability and optimum moisture transfer.

SUPER HIGH DENSITY FOAM
Offers super-high density with first-rate breathability as well as improved shock absorption characteristics.

ORTHOPAEDIC TPE GEL
Specially developed for medical shear-force absorption.

Firm legwear padding

Why has firm legwear padding not been around for longer?
Because high-quality foams with better shock absorption characteristics are denser, which means they lose breathability. Using a patented method, SQlab has managed to break open the structures of very dense foam. The outcome is high breathability comparable to traditional padding while maintaining full, perfect shock absorption.



Minimisation of shear forces

Pain starts at the periosteum, a layer of tissue enveloping the bone, although it is not so much the pressure that is the problem but rather the shear forces that are created by pedalling. The pelvis' light yet constant movement on the saddle results in painful shear forces against the periosteum. The SQlab-Pad M and SQlab-Pad W feature a thin layer of orthopaedic TPE gel. This gel was specially developed for medical shear-force absorption.

3003168 SORMANO (16133)

GONSO has analysed the everyday problems of cycling in detail and, as an answer, developed the SITIVO cycling legwear.

Cycling legwear that caters to the individual requirements and pressure points of each cyclist thanks to three different pads, all with an aim of making cycling a pleasure.

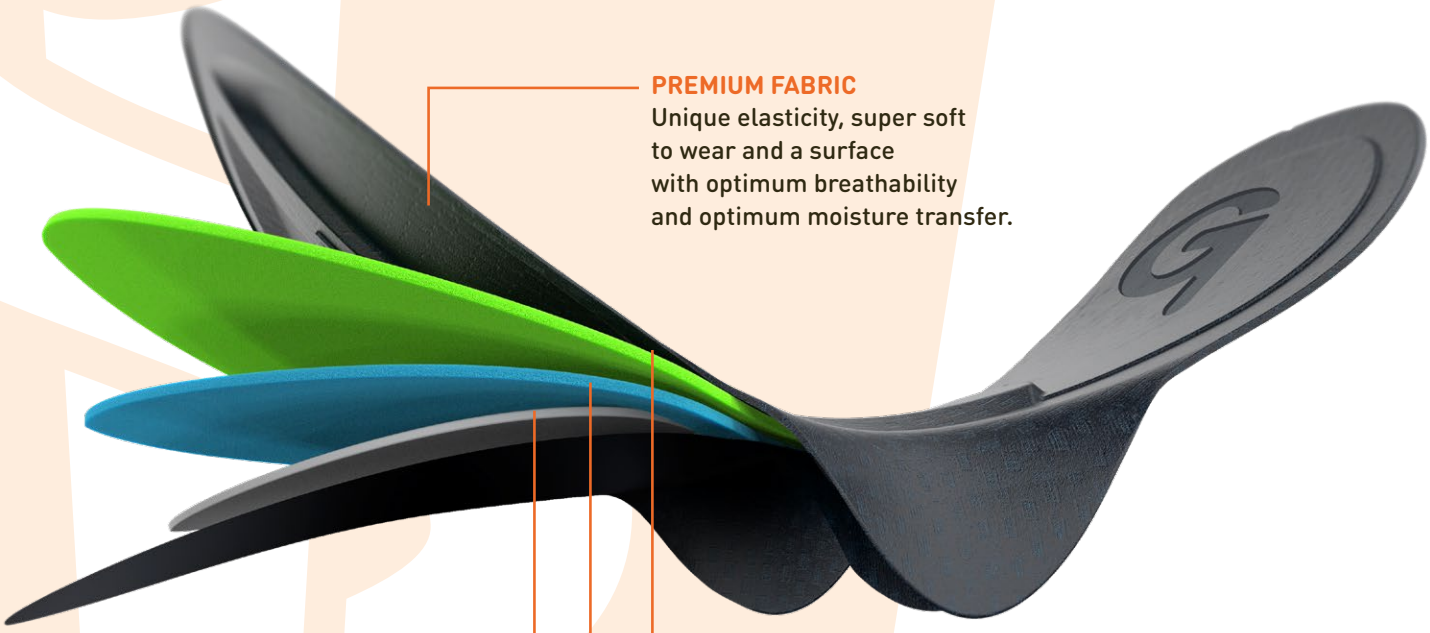
GONSO MEETS SQlab

Expertise in cycling legwear meets ergonomics experts



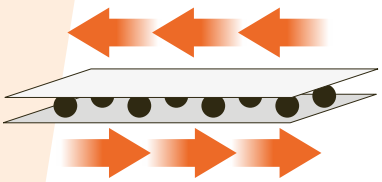
PREMIUM FABRIC
Unique elasticity, super soft to wear and a surface with optimum breathability and optimum moisture transfer.

SUPER HIGH DENSITY FOAM
Offers super-high density with first-rate breathability as well as improved shock absorption characteristics.

ORTHOPAEDIC TPE GEL
Specially developed for medical shear-force absorption.

Firm legwear padding

Why has firm legwear padding not been around for longer?
Because high-quality foams with better shock absorption characteristics are denser, which means they lose breathability. Using a patented method, SQlab has managed to break open the structures of very dense foam. The outcome is high breathability comparable to traditional padding while maintaining full, perfect shock absorption.



Minimisation of shear forces

Pain starts at the periosteum, a layer of tissue enveloping the bone, although it is not so much the pressure that is the problem but rather the shear forces that are created by pedalling. The pelvis' light yet constant movement on the saddle results in painful shear forces against the periosteum. The SQlab-Pad M and SQlab-Pad W feature a thin layer of orthopaedic TPE gel. This gel was specially developed for medical shear-force absorption.
