of example only and do not reflect
our current collection.

FILTRAL
FASHION EYEWEAR

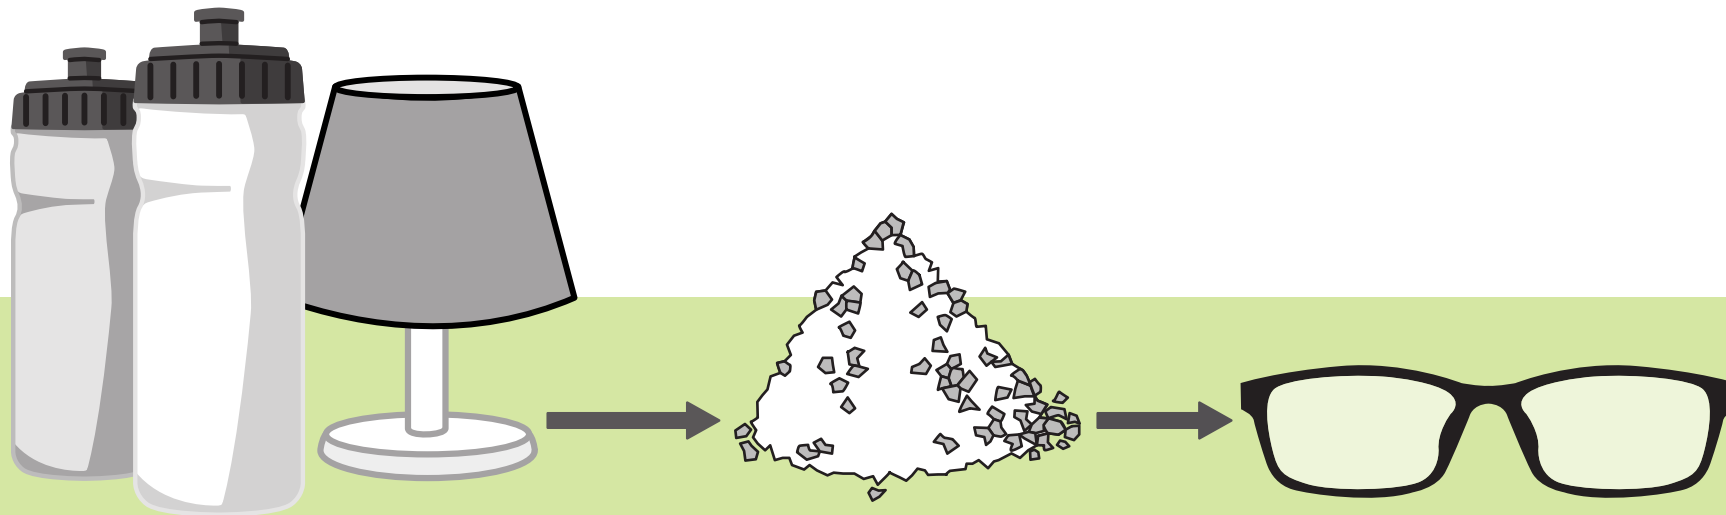

From 2021, we are offering reading glasses made of recycled plastic – our step towards more sustainability.

The basis of our new reading glasses is “post-consumer material”.

Here, after the end of their use purpose, plastics are not disposed of as residual waste, but are treated and reused.

The quality of the new reading glasses made of recycled material remains at an unchanged, high level; however, the manufacture protects valuable resources.

READING GLASSES WITH BLUE LIGHT FILTER

Function of reading glasses with blue light filter

Smartphones, tablets, computers and notebooks are part of our everyday lives. With the daily and often intensive use of computers, smartphones and tablets, our eyes are more frequently exposed to artificial blue light emitted by modern displays. The longer the eyes are exposed to these light sources, the higher the strain can be. Symptoms such as eye fatigue or headaches may occur.

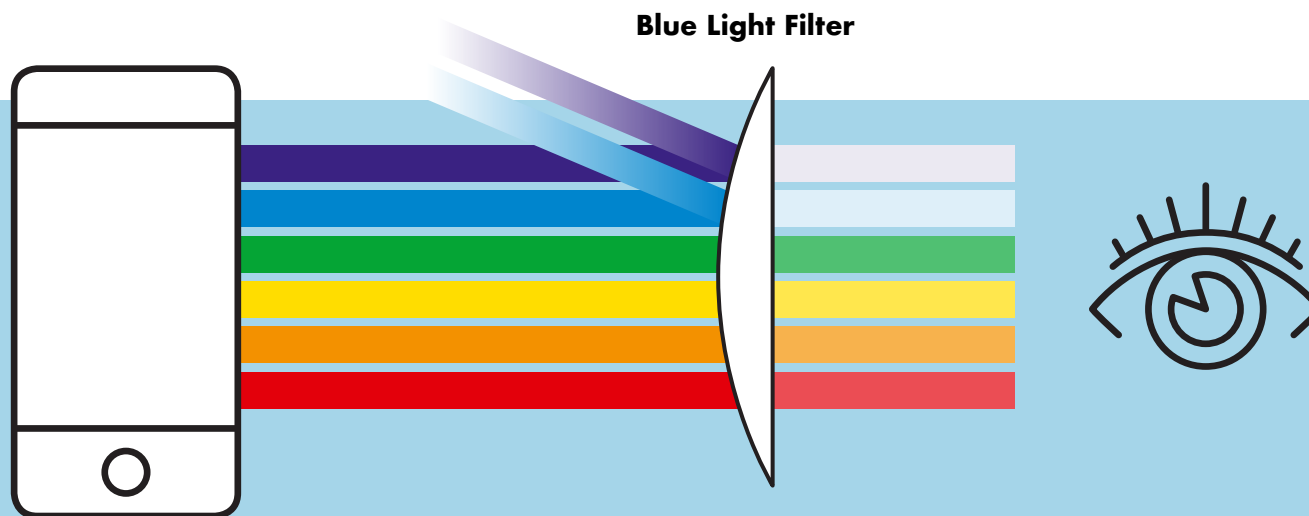

To protect the eyes while using digital devices, reading glasses with a blue light filter absorb approx. 30% of the artificial blue light.

Blue light filters also reduce the glare of displays and improve contrast perception – visual comfort is increased.

The lenses of these reading glasses do have a very slight yellow tint, but this does not affect the natural colour perception.

Benefits of blue light filtering reading glasses:

- Integrated Blue Light Filter protects the eyes when using a computer, smartphone or tablet
- Approx. 30% of the artificial blue light is absorbed
- Reduce eye strain and fatigue
- Increased comfort and reduced glare at the same time
- Improved perception of contrasts and details
- 100% UV protection
- Optical and mechanical tests according to international standards
- Reading glasses „Palermo”: type examination certificate available

FILTRAL
FASHION EYEWEAR

NORMS & STANDARDS FOR READING GLASSES

Alongside an attractive design, the highest levels of quality and safety are also our top priorities – these are the basis for each and every one of our products.

All Filtral reading glasses meet the European standard EN 14139.

All Filtral glasses bear the CE mark and thus document their compliance with the EU regulations.

The quality of the products is also regularly checked by recognised testing institutes.

Quality management

Filtral works with a quality management system which is certified according to the international standards ISO 9001 and ISO 13485. All products are therefore subject to strict controls – this guarantees the highest quality and safety.

Filtral's sunglasses are tested well beyond the requirements of the international standards in the company's own testing facility (certified in accordance with ISO 9001).

Energy and environmental management

Filtral has an energy management system which is certified according to ISO 50001 and an environmental management system which is certified according to ISO 14001.

Both are developed further on a consistent basis as part of the sustainability strategy of the uvex group.
